

Dear Walter,

As in the course of human vicissitudes a generation succeeds another, in a similar way in the path of Science to the hardly conquered advances are by necessity succeeding others, equally hardly conquered.

The reason why I did not send more papers for publication is to be attributed to my new PC which consistently refused to perform when I loaded my time tested programs.

And for what regards my scientific pursuit, this blackout due to the non performance of the PC was bonanza since I managed to reach some very positive results, I mean that I finally solved the problem in regard of what was defined "restricted relativity" which I would suggest requires a definition since is concerning the "physical representation in real time made in absence of gravitational interactions, between two gravitational systems, in one of which is the observer, which(physical representation) can be obtained through interpretation of signals originated by dissipation coming out of the physical mass observed" .

I also had sufficient time to meditate and put to test the solution.

In all good faith I presume that I solved it reasonably and justifiably well.

Said that, I confirm that the problem mainly concerns representations of position in conditions of simultaneity obtained through observations and interpretations of signals generated by dissipation of the Heat produced (by gravitation) inside the large gravitational objects observed, that give the position in the Euclidean space (real or virtual), and to it must be added the retardation (real or virtual) of temporal phenomena (happening inside the object observed).

I also managed to give the description of how the internal transformations-degradations caused by gravity are happening inside masses (making stars out of them, when they have large enough mass) and to present the analogies existing between the phenomena of gravity and the phenomena of heat production and dissipation.

The problem was never stated clearly by Lorentz et allied, and presently the solutions offered purporting to be justified by a theory or another, are, to say the least, empirical since the said theories lack on the whole a complete physical interpretation (which contemplates, presence of the Ether/ESF, the Doppler Effect and phenomena of transformation-degradation of mass-energy endowed of spin etc. and in this particular case a link, "SUMMA RELATIO" connecting the systems, was never spotted) .

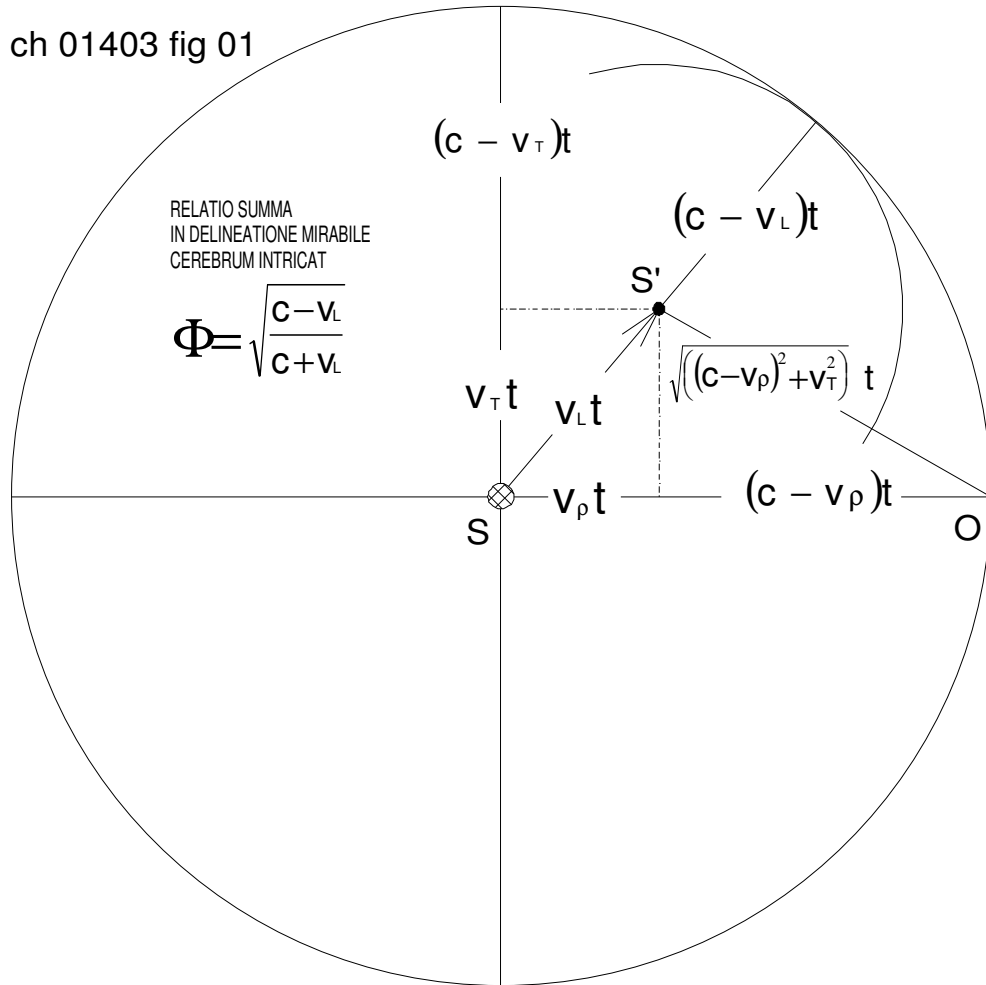

I mention it in the graphic annexed, but, reserve to present and explain it in due course.

The end of the unphysical appreciation that the space is "empty of substance" and all the semantics that followed, is at hand and has been reached starting from the simple observation that Nature "horror habet vacui" therefore the Ether/ESF theory is (and had to be) behind the solution that I developed.

I give you a graphic whose simplicity is deceiving since it contains (hidden to the unprepared mind) many of the concepts on which the whole theory is based and for that reason I called it

“DELINEATIO MIRABILIS”.

ch 01403 fig 01

DELINEATIO MIRABILIS

It is available for perusal and hopefully for comment to you and to all the readers of the GSJ, and I spare to all, for the moment, the necessary long and winding explanations.

I find no urge to supply them since I do not expect to be quickly accepted and many concepts are in any case contained in my previous papers (if one reads them with attention) .

I only intend, for the time being, to show the Cup with which my efforts were rewarded.

I am sure that the value of this graphic, in time, will be appreciated, but for now let it be a sort of puzzle baffling and disconcerting the minds of those who see it.

“RELATIO SUMMA IN DELINEATIONE MIRABILE CEREBRUM INTRICAT”

In faith

Antonio Ruggeri
